About Me

A dedicated Computer Science student with a strong foundation in Artificial Intelligence, full-stack development and data-driven solutions.

Skills

Technologies: React, Flutter, Node JS, Express JS, SQL, MySQL Workbench, .NET, SKlearn, Bootstrap.

Programming Languages: Python, C/C++, JavaScript, dart, C#.

Artificial Intelligence: Natural Language Processing, Neural Networks (LSTM, Transformers, etc.), Machine Learning Models, Data Preprocessing and Handling.

Education

BS in Computer Science | 2021-2025 | National University of Computer & Emerging Sciences – FAST, Karachi.

Inter [Pre-Engineering] | 82% | 2019-2021 | Adamjee Govt. Science College- Karachi

Matric [Science] | 86.6% | 2017-2019 | Federal Secondary School, Karachi.

Work Experience

- **Artificial Intelligence Intern at DataCrumbs (Jan, 2025 – Feb, 2025):**
 - Worked on Machine learning models by training and testing some Machine Learning models including Linear regression, LSTM and XG boost.
 - Worked with OpenAI LLMs and embeddings, implementing Retrieval-Augmented Generation (RAG) for efficient data retrieval and response generation.

Projects

- **H.Y.D.R.A Financial forecasting in Supermarkets (Machine learning, Deep learning):**
 - Collected and analyzed data, identified key features, and conducted feature engineering.
 - Preprocessed 100,000+ data points, tuned hyperparameters, and trained models using SARIMA, XGBoost, LSTM, and Transformers to identify the optimal approach for large-scale datasets.
- **Doctor Appointment Booking System (Full-Stack Development):**
 - Developed a **.NET Web** API for managing appointment bookings, including scheduling, retrieval, and updates for doctors and patients, and integrated **authentication** for secure access control.
 - Integrated the backend with a **React** frontend, enabling seamless interaction for users to book and manage appointments.
- **Chat with PDF (Basic RAG integration):**
 - Developed a PDF-based conversational AI using Streamlit and OpenAI LLMs, enabling contextual Q&A from uploaded documents by integrated advanced search and retrieval techniques
- **Selling Point (Full Stack Development):**
 - Developed a point-of-sale software with a debt tracking system using **Node.js** for the backend, allowing storage and management of debt records for each customer and vendor, also Implemented features for managing normal and debt-based purchases and inventory management.
